EDUCATION

Singapore Institute of Technology and University of Glasgow

April 2025

Bachelor of Science with Honours in Computing Science | GPA: 4.68/5

Modules: Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Cloud & Distributed Computing, Professional Software Management (Agile Scrum), Cybersecurity, Data Analytics, Machine Learning.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, C, C++, C#, Dart, Kotlin, PHP, R, SQL, HTML, CSS, Bash

Technologies: MySQL, Microsoft SQL Server, SQLite, Firebase, Supabase, Redis, MongoDB, DynamoDB, Chroma, Git, Docker, Kubernetes, AWS, GCP, Azure DevOps, Node.js, React.js, Angular, Vue.js, Spring Boot, J2EE, ASP.NET, Flutter, CodeIgniter, Apache Kafka, WebSocket, RabbitMQ, Nginx, RESTful API, CI/CD, OAuth2, JWT, GraphQL

WORK EXPERIENCE

CrimsonLogic

June 2025 – Present

Software Engineer | Full-time

- Developed truck appointment and terminal capacity management modules for PSA's Port Community System in Antwerp using Spring Boot and Angular, improving truck scheduling and reducing peak-hour terminal congestion.
- Designed and executed over 500 UAT test cases with cross-module teams to validate end-to-end workflows. Resolved 40 defects, including a critical concurrency issue that caused overbooking of the last available timeslot.
- Set up AI-assisted development practices by converting team coding standards into AI agent skills and automating Azure DevOps PR review workflows, improving code consistency and reducing feature delivery time by 20%.

PSA International

Sep 2024 – May 2025

Software Engineer | Internship

- Automated migration of 50 Kafka topics and 150 consumer groups with reusable batch scripts, ensuring accurate replication of configurations (partitioning, retention policies, ACLs) across environments.
- Designed and executed 1,000+ test cases for enterprise systems, Global PortNet and DigitalPort, identifying critical defects and collaborating with developers to resolve issues and ensure a stable production release.
- Led solution design by collaborating with designers to translate client requirements into 60+ Figma UI screens, and developed Angular frontend components integrated with backend services for shipping lines and hauliers.

PROJECTS

PSA CodeOptics (*Angular, Spring Boot, Spring AI, Ollama, Qwen-2.5-Coder, Chroma, H2 Database, JasperReports*)

- Implemented an interactive dashboard for analyzing PSA GitLab repositories, providing real-time visibility into branch activity, including merged, unmerged, active and stale branches to reduce manual tracking and oversight.
- Orchestrated Qwen-2.5-Coder (LLM) to generate natural language summaries of branch context and code changes, using preprocessed and chunked code diffs with commit messages to help developers understand branch purpose.
- Automated AI-based code reviews on GitLab merge requests via webhook, using custom code rules aligned with PSA coding standards to detect bugs, suggest improvements, and evaluate code quality and style.
- Built a feedback filtering system that stores downvoted code review comments as vector embeddings in ChromaDB, allowing the model to improve review quality over time based on developer preferences.

Ticket Vibe (*Docker, Kubernetes, React.js, WebSocket, RabbitMQ, Node.js, Redis, MongoDB, Cloudflare, PayPal*)

- Developed a microservice-based ticketing platform with a virtual queue system to manage high volumes of concurrent traffic, ensuring fair access and scalability through GCP Kubernetes horizontal pod scaling based on CPU metrics.
- Optimized security by implementing rate limiting, CAPTCHA, and Cloudflare protection, preventing scalping bots and mitigating DDoS attacks under stress testing with 10,000 simulated requests per minute.
